

Geography - Year 4 - How do rainforests and deserts differ?

Glossary:

- Tropic of Cancer - Also referred to as the Northern Tropic, is the most northerly circle of latitude on Earth at which the Sun can be directly overhead.
- Tropic of Capricorn – Referred to as the Southern Tropic is the southernmost latitude where the Sun can be seen directly overhead.
- Equator -An imaginary line around the middle of the Earth (latitude 0°).
- Tundra - A vast, flat, treeless Arctic region of Europe, Asia, and North America in which the subsoil is permanently frozen.
- Deciduous – A tree or shrub shedding its leaves annually.
- Coniferous - Any of a group of mostly evergreen trees and shrubs (as pines) that typically produce cones and have leaves resembling needles or scales in shape.
- Savannah - A grassy plain in tropical and subtropical regions, with few trees.
- Temperate - A place that has regular seasons of warm and cold weather
- Ecosystem – A geographic area where plants, animals, and other organisms, as well as weather and landscape, work together to form a bubble of life.
- Vegetation belt - An area with distinct plant types, determined by climate, soil, drainage and elevation.

Biomes
on land

Sticky Knowledge:

- To know the location of the world biomes.
- To know where the Equator, Tropic of Cancer and Tropic of Capricorn are.
- To know how climate affects the type of vegetation and animals living in an area.
- To know the location of major rainforests and deserts within the world.
- To know the structure of the rainforest.
